# Md. Arnob Tanvir | Full Stack Developer

arnob0188@gmail.com +880 01853958635 Khilgaon, Dhaka arnob-tanvir-b0122527a tanvir0188

## CAREER SUMMARY

Full Stack Developer with 2 years of experience building production applications, specializing in JavaScript, backend development, and system architecture. Experienced in developing scalable APIs, custom frontend integrations, real-time systems, and cloud deployments using AWS, Cloudflare, DigitalOcean. Led end-to-end development of multiple client projects and built AI-powered platforms with asynchronous processing and real-time notifications. Able to turn complex requirements into practical solutions and independently drive new features from architecture to production.

## SKILLS

- **Expertise in:** Next js, Express js, Python
- **Programming Languages:** TypeScript, JavaScript, Python, Java, Go, PHP, C, C++
- **Database:** PostgreSQL, MySQL, Mongodb
- **Version control tools:** GitHub, GitLab
- **Cloud & Devops:** Docker, AWS, Cloudflare

## PROFESSIONAL EXPERIENCES

**Executive Backend Developer** **Venture AI(Jun 2026 - Present)**

- Leading end-to-end development of client projects, including system architecture, database design, API development, and production deployments.
- Conducting technical R&D to evaluate project feasibility and recommend suitable technology solutions.
- Managing communication and technical discussions with international clients throughout the project lifecycle.

**Junior Backend Developer** **Venture AI(Jun 2025 – Jun 2026)**

- Designed and developed RESTful APIs and database schemas for over 10 applications
- Implemented payment integrations and handled application deployments in cloud platforms

**Fullstack Developer** **Nirman IT(Jan 2025 - Jul 2025)**

- Designed and integrated REST APIs and Web Socket-based systems
- Delivered over 3 successful projects

## PROJECTS

**Puremotion** **Live link**

**Tech:** Python, React, WebSocket, Docker, Celery, PostgreSQL, Redis, Stripe, VEO API, Cloudinary

**Overview:** An AI-powered platform that allows users to upload photos and generate short videos using the VEO AI model, turning personal memories into shareable video content.

- Engineered the complete backend system including integration with the VEO AI model for video generation, and a credit-based usage system.
- Optimized long video generation issue by moving the process to background workers, preventing request timeouts, and implemented real-time WebSocket notifications to make the users informed instantly when their video is ready.

**Trulee** **Live link**

**Tech:** Python, Langchain, Web RTC, Docker, Celery, PostgreSQL, Redis

**Overview:** An AI powered Contact book to keep track of friends, relatives, and activities.

- Integrated LangChain to develop AI-powered conversational workflows and real-time voice interactions using WebRTC.
- Implemented a reminder-based notification system using Firebase Cloud Messaging (FCM), with automated scheduling logic to trigger notifications based on user-defined times.

**Treioferte** **Live link**

**Tech:** Python, WebSocket, Docker, Celery, PostgreSQL, Redis, Stripe, Cloudinary

**Overview:** An online travel platform that connects travelers with agencies through a reverse-auction system, where users post trip requirements and agencies submit customized offers.

- Designed and developed the real-time chat system and notification system to enable seamless communication between travelers and travel agencies.
- Developed the admin panel for managing travel requests, users, and overall platform operations, and handled application deployment.

## EDUCATION

**East West University(**B.Sc in Computer Science & Engineering**)** **January 2020 - January 2025**
